

LAWN START – Program 1

Lawn Start was specially designed for recently constructed homes, or neglected lawns at established homes, or lawn damaged by harsh winter weather, especially erosion or large areas of winter burn. We will produce a picture perfect lawn for your enjoyment throughout the summer and fall seasons. Initially, **Program 1** begins with a complete:

- Rototilling,
- Seeding and/or sodding.

Then throughout the growing season, we continue with a carefully planned schedule of:

- Fertilizing,
- Liming,
- De-grubbing,
- Insect control,
- Weed control,
- Disease control.

During the early stages of growth, it is important to control the spread of insects and diseases which affect the healthy development of grass seedlings. Our pesticides and herbicide weed killers are formulated by consultants who also provide supplies and materials.

Finally, we will provide you with a proper watering schedule tailored to you lawn's progress.
